

Nestlé Schöller GmbH & Co. KG: Frozen food management

Ice-cold pleasures

Nestlé Schöller - the name alone means ice-cream and summer. In gastronomy it also stands for high-quality frozen food and frozen bread, cakes and pastries. Nestlé Schöller takes care of the production and distribution of these ice-cold pleasures with the help of professional logistics management. On the one hand, full and partial loads must be shipped between production facilities and regional distribution or trade depots. Supply transport for production has to be organised as well. On the other hand, depot-related trips for regional distribution are on the daily agenda. Nestlé Schöller decided on trip planning à la PTV.

User: **Nestlé Schöller**, production and logistics as well as regional area supply.

Task: Trips for branded frozen food without depots and depot-related.

Solution: PTV Intertour/Dispatch and PTV Intertour.

Optimising long distance transport with PTV Intertour/Dispatch

The logistics manages a freight volume of nearly 1.2 million palettes with 55,000 orders. The driver and trailer in a trip are often swapped so that breaks and shifts don't restrict the trip length. The entire transport is controlled by PTV Intertour/Dispatch, which supports dispatchers when compiling a load and searching for a return load. It has also proven itself as a transport management system for Nestlé Schöller: Due to the central data base, the report generator can prepare all required information for dispatching, warehouse and commission departments and for trip invoicing and trip crediting. Even statistics or goods flow analyses aren't a problem.

From depot to customer with PTV Intertour

The regional area supply is planned with PTV Intertour. In the high season up to 350 trips must be planned daily. The data is located and the fleet is managed in PTV Intertour/manager. In PTV Intertour the orders are divided amongst the trips in the most cost-effective way. As the planner can modify the

trips manually, sudden orders or driver absence can be included in the planning. Thanks to the interface to SAP R/2 Schöller could start planning with PTV Intertour just one day after installation.

A completely successful solution

The PTV solution improves performance and planning. Thanks to the digital maps the dispatchers always have a clear overview of the planning situation. Michael Odorfer, transport manager at Schöller sums up the situation: "The PTV products have worked very well: With PTV Intertour and PTV Intertour/Dispatch dispatchers have less of a work load and transportation can be planned more efficiently. The introduction of the software has also lead to clear reduction in transport costs".

Ice-cold pleasures

Further installations in international depots are planned for the regional area distribution. The PTV partner company LOCOM Consulting GmbH is designing the integration of the management information system CARGO for the analysis of transport processes and simulation of changed logistic structures.
