

## **Windows 2000 Security Issues**

In mid-April 2011 Microsoft released a security patch for Windows which conflicts with many existing software packages. If users apply the patch, VISUM will no longer run under Windows 2000.

Our own development computers are affected in the same way. We will do our best to ensure that VISUM 11.5 will continue to run under Windows 2000, as long as users do not apply the security patch on their own machines and as long as Microsoft does not take further action in plugging the security hole.

Please note: PTV cannot assume responsibility, if users do not apply the security patch. In any case, VISSIM preview will no longer be available under Windows 2000. This is in line with the fact that we stopped supporting VISSIM under Windows 2000 a while ago. Finally, VISUM 12.0 will definitely no longer run under Windows 2000.
